RUZZ

FULL-STACK DEVELOPER · STUDENT

Puerto Princesa City, Palawan
johnruzzelcorrea8@gmail.com
github.com/Ruzz-1010

Student developer building real systems across IoT, mobile, and web. I work end to end — sensor firmware and APIs through React dashboards and Flutter interfaces — with a focus on clean data models and software that solves local problems. Currently open to internships and junior full-stack roles.

SELECTED PROJECTS

Project FALCON-01 — Thesis Developer

2026 — Present · github.com/Ruzz-1010/Project-FALCON-01

- Building a compact ESP32 coastal buoy that samples water pressure, wind speed and direction, GPS position, and solar battery state.
- Developed the React + TypeScript dashboard for live wave, wind, GPS, and power telemetry, with event-driven alerts and a local fallback UI.
- Connected an edge service with SQLite history and built a short-term wave-height forecasting pipeline with backtests.

Stack — Python, React, TypeScript, ESP32, SQLite

PuertoScanCare — Capstone Developer

2026 — Present · Private thesis repository

- Building an AI-assisted prescription-to-pharmacy decision-support app for patients in Puerto Princesa City.
- Implemented Patient, Pharmacy Staff, and Administrator shells in Flutter with Material 3, Riverpod state, and go_router navigation.
- Designed the quantity-aware comparison flow around medicine availability, estimated total cost, inventory freshness, and distance.

Stack — Flutter, Dart, Riverpod, Material 3

Pickleball Reservation System — Solo Developer

2026 · Private-Sports-Court-Reservation-System

- Laravel + PostgreSQL booking platform for a private pickleball facility: court availability, PayMongo QRPh checkout, receipts, and email confirmations.
- Added admin reporting for bookings, payments, and court utilization.

Stack — Laravel, PHP, PostgreSQL, Tailwind CSS, Alpine.js

Food Ordering Platform — Full-Stack Developer

2026 · food-ordering-app-one-mu.vercel.app

- Multi-role ordering app with customer, restaurant, rider, and admin dashboards, role-based auth, live order status, and restaurant analytics.
- Added map-based delivery tracking with Leaflet and deployed the live demo on Vercel.

Stack — React, Express, MongoDB, Tailwind CSS, Leaflet

EDUCATION

Fullbright College

Puerto Princesa City, Palawan

Thesis work: Project FALCON-01 (IoT coastal monitoring) and PuertoScanCare (prescription-to-pharmacy decision support).

TOOLBOX

FRONTEND	React, JavaScript, TypeScript, Tailwind CSS, Flutter, Dart, Material 3
BACKEND	Laravel, PHP, Node.js, Express, PostgreSQL, MongoDB, SQLite, Socket.IO
TOOLS	Git & GitHub, Docker, Vercel, Linux, Figma, Postman, ESP32 / Arduino
